DETAILED ACTION

Allowable Subject Matter

Claims 1-16 are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance: Although Beers et al. (US PAT No. 5,568,064) teaches a bidirectional transmission line driver/receiver, one of ordinary skill in the art would not have been motivated to modify the teaching of Beers et al. to further includes, among other things, the specific of detecting a transmission state of digital data output from the digital device, according to the changed setup of the Vref adjusting circuit, determining an optimum setup of the Vref adjusting circuit to allow error bits of the digital data to be minimized and setting up the Vref adjusting circuit according to the optimum setup as required by claims 1 and 12 and the specifics of a Vref controller calculating an optimum resistance value where a Vref correction is output to minimize error bits of the transferred digital signal, setting up the resistance value as a calculated optimum resistance value and storing the optimum resistance value as required by claims 6 and 13. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2819

Nguyen et al. (US PAT No. 6,876,248) discloses a voltage driver modifying a supplied compensated voltage based on a feedback signal.

Takahashi (US PAT No. 5,132,555) discloses a power-supply voltage converter for converting an external power-supply voltage into a lower internal power-supply voltage and supplying the converted voltage to the internal circuit.
